EDUCATION

Chandigarh Engineering College
Bachelor of Computer Science and Engineering

Oct 2021 – 2025
7.9 CGPA

EXPERIENCE

Takkada (PaySaathi)

May 2026 – Present

Founding Engineer | Flutter, Supabase, PostgreSQL

Remote

- Built end-to-end ERP modules across **Flutter mobile/web and Supabase backend** for Sales Orders, Quotations, Invoices, GRNs, and Credit Notes, including API contracts, validation logic, state flows, and production hardening.
- Engineered backend APIs using **Supabase Edge Functions and PostgreSQL RPCs**, with schema migrations, RLS/RBAC policies, and feature-access controls for role-based behavior and register visibility.
- Developed accounting and document pipelines for **PDF generation, GST, e-invoice/e-way bill handling, and TallyPrime sync/writeback**, improving data consistency and recovery across invoice and order workflows.
- Built and deployed a **Next.js admin/CRM dashboard** integrated with Supabase auth and services, and resolved production issues across app, web, APIs, and database layers.

Zomato

Jul 2025 – Dec 2025

Software Development Engineer (SDE-1) | Go, gRPC, MySQL, MongoDB

Gurgaon, India

- Optimized backend request paths by eliminating redundant **gRPC and MySQL** calls, improving **p90 latency by 5x** across production CX services.
- Automated ticketing and chatbot workflows, reducing manual operations by **80%** and support workload by **35%**.
- Integrated **Zendesk and Freshdesk** with internal microservices, implementing ticket synchronization, callbacks, and external CX workflows.

The Linux Foundation

Nov 2023 – Mar 2024

Software Development Engineer Intern | Docker, Nginx, gRPC, Minikube

Remote

- Migrated service communication from traditional HTTP-based flows to **gRPC**, improving data-transfer performance by approximately **60%**.
- Built containerized CloudForet development environments using **Docker, Nginx, and Minikube**, supporting development across **50+ microservices**.
- Improved local development and deployment workflows for distributed services through reusable container and infrastructure configurations.

PROJECTS

DurableGo – Durable Workflow Engine | Go, PostgreSQL, Next.js, Docker

[Live ↗](#) | [GitHub ↗](#)

- Built a **PostgreSQL-backed durable workflow engine in Go** with lease/fencing-token semantics, idempotent workflow starts, and an immutable event log for every state transition.
- Proved crash safety via automated failure scenes that **SIGKILL workers mid-execution**; stale completions are rejected and abandoned work re-queued, verified by **testcontainers** suites under the race detector.
- Deployed an all-in-one container with API, scheduler, workers, and demo traffic driver, plus a **Next.js operations dashboard** streaming live execution and lease data.

ParseFlow AI – Document Review & Compliance | Next.js, Fastify, PostgreSQL, Gemini, S3

[Live ↗](#) | [GitHub ↗](#)

- Built an AI document pipeline (OCR → classify → schema-constrained extraction) with **per-field confidence and char-accurate provenance** into source text for one-glance human verification.
- Designed a **versioned compliance rule engine** where AI-drafted rules stay inert until human approval; violations surface with offending-field evidence and an immutable audit trail.
- Implemented **multi-tenant RBAC** enforced server-side, with extraction quality gated by a 36-document eval corpus; deployed on Vercel, Render, and S3-compatible object storage.

ACHIEVEMENTS

- Reached **2202 rating (Master)** on [Codeforces ↗](#).
- Achieved **2400+ rating** on [LeetCode ↗](#), placing approximately in the **top 0.6%** globally.
- Achieved a **5-star rating** with a peak rating of **2017** on [CodeChef ↗](#).

TECHNICAL SKILLS

Languages: Go, Python, C++, TypeScript, JavaScript, SQL

Backend: Go, Node.js, gRPC, REST, PostgreSQL, MySQL, MongoDB, Redis, Supabase

Frontend/Infra: React.js, Next.js, Flutter, AWS, Docker, Linux, GitHub Actions, Cloudflare

Core: Distributed Systems, Microservices, System Design, Data Structures & Algorithms
