EXPERIENCE

Takkada (PaySaathi)

May 2026 – Present

Founding Engineer | TypeScript, Node.js, Next.js, PostgreSQL/Supabase

Remote

- Own production ERP/accounting workflows across app, APIs and PostgreSQL for orders, invoices, GRNs, credit notes, GST, e-invoice/e-way bill, and **TallyPrime sync/writeback**.
- Designed backend APIs, **PostgreSQL RPCs**, schema migrations, RLS/RBAC and transactional workflows; shipped Next.js admin/CRM tooling and resolved production issues across application, API and database layers.
- Hardened real production operations around permissions, payments/reconciliation, sync reliability and tenant-safe data flows in a small founding engineering team.

Zomato

Jul 2025 – Dec 2025

Software Development Engineer (SDE-1) | Go, gRPC, MySQL, MongoDB

Gurgaon, India

- Optimized latency-sensitive **Go/gRPC** request paths by removing redundant RPC/MySQL work, improving production **p90 latency by 5x**.
- Automated ticketing/chatbot workflows, reducing manual operations by **80%** and support workload by **35%**.
- Integrated Zendesk and Freshdesk with internal microservices, including ticket synchronization, callbacks and external CX workflows.

The Linux Foundation – CloudForet

Nov 2023 – Mar 2024

Software Development Engineer Intern | Docker, Nginx, gRPC, Minikube

Remote

- Migrated service communication to **gRPC**, improving data-transfer performance by about **60%**; built containerized development environments supporting **50+ microservices**.
- Contributed to Linux Foundation open-source repositories and improved local development/deployment workflows for distributed services.

OPEN SOURCE ENGINEERING

- **71 merged GitHub pull requests** across production open-source codebases spanning Go, TypeScript, Rust and Python, including databases, developer tooling, distributed systems and AI infrastructure. [GitHub PRs ↗](#)
- **SeaweedFS** – fixed a multi-filer metadata-subscription race that could pin long-lived clients to a local-only stream and silently miss remote filer writes; added regression coverage for upgrade/reconnect behavior. [PR #11251 ↗](#)
- **Plane** – prevented unnecessary background recrawls and user-metadata overwrite on issue-link updates. [PR #9763 ↗](#) **Qdrant** – stopped client construction from mutating caller-owned gRPC configuration. [PR #151 ↗](#)

PROJECTS

DurableGo – Durable Workflow Engine | Go, PostgreSQL, Next.js, Docker

[Live ↗](#) | [GitHub ↗](#)

- Built a PostgreSQL-backed durable execution engine in Go with leases, fencing tokens, idempotent starts and an immutable event log; adversarial tests **SIGKILL workers** and verify stale completions are rejected and abandoned work is safely re-queued.
- Packaged API, scheduler and workers in Docker and exposed live execution/lease state through a Next.js operations dashboard; validated concurrency with Testcontainers and Go's race detector.

ParseFlow AI – Document Review & Compliance | Next.js, Fastify, PostgreSQL, Gemini, S3

[Live ↗](#) | [GitHub ↗](#)

- Built an OCR → classify → schema-constrained extraction pipeline with per-field confidence, char-accurate provenance and human-approved compliance rules backed by an immutable audit trail.
- Implemented server-side multi-tenant RBAC and a 36-document evaluation corpus; deployed across Vercel, Render and S3-compatible object storage.

EDUCATION

Chandigarh Engineering College

2021 – 2025

B.Tech, Computer Science and Engineering

7.9 CGPA

ACHIEVEMENTS

- [Codeforces ↗](#): **2202 rating, Master**.
- [LeetCode ↗](#): **2400+ rating, Top 0.6% globally**.
- [CodeChef ↗](#): **5-star, peak rating 2017**.

TECHNICAL SKILLS

Languages: Go, TypeScript, Python, C++, JavaScript, SQL **Backend/Data:** Node.js, gRPC, REST, PostgreSQL, MySQL, MongoDB, Redis, Supabase

Frontend/Infra: React, Next.js, Flutter, AWS, Docker, Linux, GitHub Actions, Cloudflare **Core:** Distributed Systems, Microservices, System Design
